Professional Summary

I am a Software Engineer with three years of experience specializing in web application development. Proficient in modern JavaScript and Java frameworks, with hands-on experience in building scalable applications using React, Node.js and Spring Boot. Strong foundation in data structures, algorithms, and object-oriented programming. Experience deploying live applications with Docker and setting up CI/CD pipelines using GitHub Actions and Render.

Technical Skills

- Java
- Python
- JavaScript
- TypeScript
- React
- Next.js
- HTML5
- CSS3
- Tailwind
- Node.js
- Express.js
- PostgreSQL
- MongoDB
- MySQL
- TypeORM
- Mongoose
- Junit
- Jest
- ViteTest
- Pytest
- Docker
- Git
- GitHub
- RESTful APIs
- GraphQL
- E2E Testing
- NestJS
- React Native

Professional Experience

Semicolon Africa | Lagos
Software Engineer
05/2024 - Current

RoyalBrightness | Lagos
Hardware Engineer
01/2018 - 01/2020

Education

Yaba College of Technology
Diploma in Computer Engineering
04/2020 - 05/2023

Extracurricular

Semicolon Africa | Lagos
Design Thinking Critical Thinking
05/2024 - Current

Semicolon Africa | Lagos
Industrial Design
05/2024 - Current

Projects

E-Commerce Platform:
- Built a responsive e-commerce web app using React, integrating the Fakestore API to fetch and manage product, cart, and order data.
- Implemented key features such as product browsing, shopping cart, user authentication, and order summary.
- Hosted the application on Netlify, managing hosting, routing, and basic state persistence.

Contactsmgr (Full-Stack Contact Manager):
- Built a full-stack contact manager enabling users to create, search, and manage contact records without registration.
- Built the frontend with React and Tailwind CSS, and the backend with Spring Boot, handling data storage and CRUD operations.
- Hosted the frontend on Netlify, ensuring easy access and fast performance.

Backwyth - USSD Platform:
- Developed the backend system using Java (Spring Boot) in collaboration with a teammate, handling secure USSD sessions, OTP-based company onboarding, and API key generation.
- Designed and implemented the company-side dashboard using React, with features like authentication, profile management, and real-time activity tracking.
- Built an admin dashboard for each company to manage their USSD menus and view activity analytics
- Integrated MongoDB to store USSD menu structures, session logs, and user activity data efficiently.
- Containerized the backend with Docker and hosted it on Render, enabling scalable and reliable delivery.

Veegil Bank (Full-Stack Web App Clone)
- Built the front end in Next.js, with TailwindCSS for a clean, responsive design.
- Developed the backend system using NestJS and GraphQL to handle authentication, account data, and transaction operations.
- Implemented JWT-based authentication, user onboarding, account dashboard, transaction history, and peer-to-peer simulated transfers.
- Persisted user profiles and transactional data in MongoDB.
- Hosted both frontend and backend on Render, with CI/CD pipelines integrated via GitHub.

E-Commerce Platform (MERN Stack):
- Developed a full-stack e-commerce web application using React, Node.js, Express, and MongoDB
- Implemented JWT-based authentication and role-based access control for users and admins. Users can log in, browse products, and add items to cart, while admins can add products, view users, and manage user roles.
- Used React Context to manage the current user state globally, with on-demand service calls for feature-specific data.
- Followed a microservice-inspired structure, fetching user-specific data (cart, orders, etc.) after authentication.

Other Phone Numbers / WhatsApp:
